### **DETAILED ACTION**

1. This communication is responsive to the communication filed on 02/11/2009. Claims 2,4-9,13,15,16,17, 19, 21-44 are pending and claims 1, 3, 10-12,14,18 and 20 were cancelled.

### ***Allowable Subject Matter***

2. The following is a statement of reasons for the indication of allowable subject matter: Putzolu et al. ( US Patent 7,203,740) discloses having a proprietary forwarding element which is capable of forwarding and processing data packet. Putzolu et al. further discloses having a control element that handles all control functions, including routing and signaling protocols and responds to a packet using a network service API ( application program interface) and controls/modify the behavior of the data forwarding path in both the data and control planes. Putzolu et al. discloses having a switching node comprised of a forwarding element which includes a plurality of forwarding rules that facilitates packet filtering and delivering to the control plane and the next hop or destination. Terrell et al. ( PG PUB 2007/0033413) discloses having a system for secure data communication and a network includes servers, clients and network devices, server provides data storage and application hosting to support conventional distributed processing applications programs and the server functions may include web suite hosting, application service provision, internet service

provisioning. Terrell et al. further discloses data is identified by the application program according to its virtual address, the virtual address specified in an application are generally relative to the value of a base register maintained by the operating system and a map maintained by a memory management unit. Subramanian et al. (US Patent 6,970,943) discloses having a routing architecture including a compute plane, control plane and a forward plane and the control plane which provides the overall control and configuration for the routing node this control may range from running diagnostics to setting configurations for the compute plane and the forward plane. Subramanian et al. further discloses the network API can be used to instruct the forward plane to alter packet processing through the installation of hardware or software filters that facilitate forwarding rules these filters execute actions specified by a defined filter policy. Harvey (US patent 5,867,666) discloses having a virtual interfaces with dynamic binding. Harvey further discloses providing a virtual interface binding to a physical interface. However, the prior art fails to anticipate or render obvious the following recited features: Claims 2 and similar claims 4,5,78,9,13, 15,16,17,19,21,22,23,24 31 and 35 limitations: "A packet processing system comprising: a forwarding device that transmits and receives a packet through a network interface; and a control device that transfers the packet between the control device and the forwarding device, and responds to the packet using an application, wherein the control device includes a symbol section that is associated with address information of the forwarding device; and a first transfer control section that when detecting that the

application accesses the symbol section, sets a packet transfer rule in the forwarding device by transmitting to the forwarding device a setting request that the forwarding device sets the packet transfer rule that is used to transfer the received packet to the control device, and the forwarding device includes a second transfer control section that sets the packet transfer rule in response to the setting request, wherein the symbol section is a virtual interface corresponding to the network interface, the first transfer control section, when detecting that the application closes a communication port for access to the symbol section, cancels the packet transfer rule in the forwarding device by transmitting to the forwarding device a cancel request that the forwarding device cancels the packet transfer rule, and the second transfer control unit cancels the packet transfer rule in response to the cancel request.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Prior Art***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
